

HEMP DISTILLATE

ASCENT
naturals

Hemp Extract with terpenes and other plant material removed, leaving concentrated cannabinoids.

WHY HEMP DISTILLATE?

Distillate has a higher concentration of cannabinoids, requiring a lower input level. Distillates are used when a cleaner flavor or color profile is desired.

WHAT IS DISTILLATE PLUS?

Terpenes are isolated and removed during the distillation process. These can be added back to enhance the "entourage effect" and the flavor/color.

WHAT IS THE ENTOURAGE EFFECT?

It's when the cannabinoids, terpenes, and flavonoids work synergistically to create stronger effects than they could achieve individually.

WHAT IS HEMP DISTILLATE ZERO THC?

Hemp Distillate with THC removed.
